pierreplume®

Inspired by the environment !

Acoustic and aesthetic, our range of materials is designed to help designers and creators develop more environmentally friendly projects and interiors. Our materials highlight the untapped aesthetic potential of recycled textile fibers.

pierreplume® works with finesse and high standards in selecting and fraying textiles, blending fibers, and consolidating panels to offer lightweight, acoustic materials with subtle, nuanced stone-like appearances.

Acoustic materials manufactured in France

pierreplume® is a creator of recycled textile materials for architecture and design. All our materials are manufactured in France from recycled fibers sourced in France and Belgium.

The range is available in several colors and different formats, and the product can be used in all interior spaces with acoustic and aesthetic requirements (offices, meeting rooms, hotels, restaurants, reception areas, private homes, etc.). It can be applied as a module to all or part of a wall. It can also be used for other creative purposes such as furniture, events, packaging, etc...

eco-conception

**RECYCLED

**CUSTOM
CUTS**

Custom-designed patterns
cut with a digital cutter.
Easy to cut on-site.

A collection of recycled textile waste samples is displayed against a light grey concrete background. The samples include a large rectangular piece of light beige material with small red and black specks, a smaller rectangular piece of reddish-brown material with similar specks, a large dark grey circular piece, and several smaller pieces with scalloped edges in light beige and reddish-brown colors. The overall aesthetic is minimalist and industrial.

To use what already exists as a resource and inspiration

A technically advanced and eco-friendly material developed over seven years of R&D.

The textile industry is highly polluting. More than half of discarded clothing is sent abroad to end up in open dumps.

pierreplume® provides an outlet for textile waste in France.

Our range of materials

REMIX COLLECTION

Blend of recycled textiles

Discarded clothing, workwear, production scraps... every shade in the REMIX range comes from specific textile sources. Selecting sources, fraying textiles, blending fibers, and consolidating panels are the steps involved in producing this range of five shades with subtle, nuanced stone-like appearances.

RECYCLED SOURCES

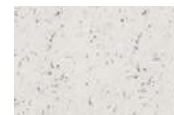

INDUSTRIAL
PRODUCTION
WASTE

CLOTHES
OUT OF USE

PROFESSIONAL
CLOTHING

To create a desirable
solution
for end-of-life
textiles
that pollute
our planet.

Today, France recycles only a small portion
of its own textile waste.
We want to help develop textile recycling in France.

PLUSH COLLECTION

Recycled stuffed toys

More than 5,000 tons of stuffed toys are thrown away each year in France. The PLUSH range offers a new outlet and is helping to establish the first recycling industry for this resource, which has struggled to penetrate the second-hand market.

The collected stuffed toys are sorted by color, hard spots are removed, the stuffing and skins are separated, shredded, and delicately mixed together. The PLUSH range, result of this in-depth design process, offers five shades of brown and pink.

Pierreplume works in partnership with social and solidarity economy organizations for the collection, sorting, and dismantling, which is carried out entirely in France.

RECYCLED SOURCES

USED
STUFFED TOYS

8 million stuffed toys are thrown away every year in France.

To date, there is still no structured recycling system in place.
We are helping to develop the first recycling system for end-of-life stuffed toys.

technical information

Sound absorption

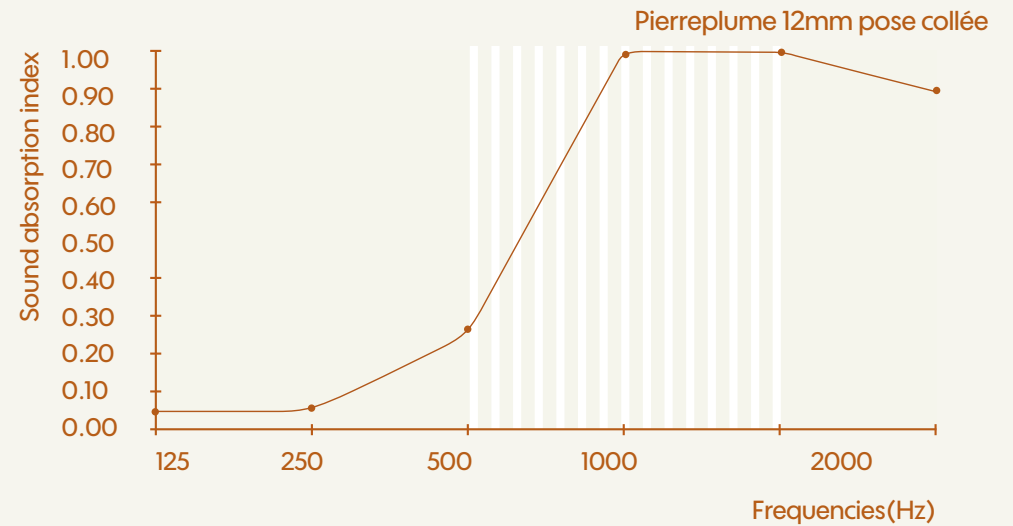

Sound absorption aims to:

- limit reverberation,
- reduce sound wave levels,
- improve speech intelligibility in a room.

Acoustic correction of a room's sound environment involves the use of absorbent materials.

When glued or nailed to walls, **pierreplume®** is particularly effective at absorbing high frequencies.

Practical sound absorption coefficient curve
in accordance with standard NF EN ISO 354

Acoustic frequencies
high and mid-range human voices
